<b>Preface</b>	<b>v</b>
<b>1 Compact sets in some functional spaces</b>	<b>1</b>
1.1 General aspects of compactness in metric spaces . . . . .	1
1.2 Compactness in Banach Spaces with Basis . . . . .	6
1.3 Compactness in $C(K)$ . . . . .	11
1.4 Compactness in $L_p(\Omega)$ . . . . .	16
1.4.1 Average functions and their properties . . . . .	16
1.4.2 Weak compactness in $L_p$ . . . . .	20
1.4.3 Strong compactness in $L_p$ . . . . .	22
<b>2 Compact self-adjoint operators</b>	<b>25</b>
2.1 Compact operators . . . . .	25
2.2 The general form of linear functionals . . . . .	31
2.2.1 Linear functionals in Hilbert spaces . . . . .	31
2.2.2 Linear functionals on $C[0, 1]$ . . . . .	34
2.2.3 Linear functionals on $L_p(0, 1)$ . . . . .	37
2.3 Adjoint operators . . . . .	41
2.4 Compact self-adjoint operators in H-spaces . . . . .	45
2.4.1 The Hilbert-Schmidt theorem . . . . .	51
<b>3 Some examples and applications</b>	<b>53</b>
3.1 Fredholm equations . . . . .	53
3.1.1 Symmetric and degenerate kernels . . . . .	53
3.1.2 The general case of non-degenerate kernels . . . . .	57
3.2 Sturm-Liouville problems . . . . .	61
3.2.1 Reduction to an Integral Equation . . . . .	61
3.2.2 Properties of eigenvalues and eigenfunctions . . . . .	66
3.3 Fourier method . . . . .	68
<b>4 Integral representation</b>	<b>75</b>
4.1 Projection operators and positive operators . . . . .	75
4.1.1 Projection operators . . . . .	75

4.1.2	Positive operators . . . . .	78
4.2	Integral representation of s.-adjoint operators . . . . .	84
4.2.1	Operational polynomials and operational functions . . . . .	84
4.2.2	The spectrum of the operator $U$ . . . . .	87
4.2.3	The spectral family of projection operators and the integral representation . . . . .	91
<b>5</b>	<b>Spectral decomposition of the Laplacian</b>	<b>101</b>
5.1	The Fourier transform . . . . .	101
5.2	The Sobolev spaces . . . . .	109
5.2.1	On the weak partial derivatives . . . . .	110
5.2.2	Hilbert Sobolev spaces, completeness and inner product . . . . .	113
5.2.3	Two equivalent norms in a special Sobolev space . . . . .	115
5.3	Decomposition of the Laplacian in $R^3$ . . . . .	119
5.3.1	On the self-adjointness of the Laplacian . . . . .	119
5.3.2	Explicit form of the spectral decomposition in $R^3$ . . . . .	122
<b>6</b>	<b>Further spectral properties</b>	<b>125</b>
6.1	Some details on the projection family $P(s)$ . . . . .	125
6.2	The main spectral result . . . . .	128
6.2.1	On the weak solutions of differential equations, the Dirac $\delta$ function and the Fourier transform in $S'$ . . . . .	128
6.2.2	The main spectral theorem . . . . .	138
<b>7</b>	<b>Eigenvalues of the Laplacian</b>	<b>149</b>
7.1	Self-adjointness of unbounded operators in bounded domains . . . . .	149
7.2	Weak solutions of boundary value problems . . . . .	151
7.3	Eigenvalue problems in Sobolev spaces . . . . .	156
<b>8</b>	<b>Some applications to hydrodynamics</b>	<b>163</b>
8.1	Essential spectrum of self-adjoint operators . . . . .	163
8.1.1	Decomposition in terms of the point spectrum and the continuous spectrum . . . . .	163
8.1.2	Essential spectrum . . . . .	165
8.2	Incompressible rotating fluid . . . . .	167
8.2.1	Some notations and results from vector analysis . . . . .	167
8.2.2	Essential spectrum of the operators generated by boundary value problems for systems of partial differential equations describing linearized motions of incompressible rotating fluid . . . . .	168
8.2.3	The case of a compressible rotating fluid . . . . .	173
8.3	Stratified fluid . . . . .	179
	<b>Bibliography</b>	<b>191</b>
	<b>Index</b>	<b>193</b>
